

Marketing Strategy

Eliminating Odour, Elevating Hygiene

Real Freshness, Not Perfume

Prepared for our marketing agency partner

A shared playbook for launching and growing Rudione

A short note on how to read this document

This document is written in plain language so that everyone on the team, including those newer to marketing, can pick it up and know how to move forward. Wherever we use a marketing framework, we name it and explain in a line or two what it means, so the thinking behind each choice is easy to follow.

This is a shared playbook, written in the spirit of a partnership between the Rudione team and the agency. Where we describe what we would like done, it is meant in that collaborative spirit. A few points are firm commitments, particularly around our logos, our claims, our pricing and our approvals, and we have kept those clear because they protect the brand and keep us on the right side of the rules.

Each section ends with a short list of agency action points, which simply gathers the practical next steps in one place for easy reference.

Strategic Frameworks — Reference & Application

This strategy is built on a set of well-known marketing frameworks. The table below introduces each one in plain language, with the gist and spirit of the idea and how we apply it at Rudione. Each framework also reappears in the section where it does its main work, with a short reminder of what it means.

Framework	Gist & spirit	How Rudione applies it
The Law of Category	If you cannot be first in a category, create one you can be first in. People remember category leaders, not better imitators.	The spine of our strategy: we create and own the odour-neutraliser category in India, rather than competing as a better air freshener.
Blue Ocean vs Red Ocean	Red oceans are crowded markets where rivals fight on price; blue oceans are uncontested spaces with no direct competition.	Odour neutralisation is our blue ocean (no competitors). Cleaning is a red ocean we win on quality and value.
Purple Cow	In a field of brown cows, only a remarkable one gets noticed and talked about.	Our remarkable idea: India's first products that eliminate odour at the source rather than masking it.
Start With Why	People do not buy what you do, they buy why you do it.	Our why: spaces should be genuinely clean and odour-free at the source, not perfumed over.
TOFU / MOFU / BOFU	The funnel: Top (awareness), Middle (consideration), Bottom (conversion), with different content for each stage.	Shapes how we map each audience's journey, from first awareness to purchase.
Flywheel	Unlike a funnel that ends at the sale, a flywheel uses each happy customer to power the next, so momentum compounds.	Amazon sales bring reviews and ranking, which bring more sales, which bring more reviews.
Halo Effect	A strong positive impression of one thing spills over onto everything associated with it.	DrainOdorkill's success lends credibility to the whole range: the hero carries the science, the range rides the halo.
Lindy Effect	The longer something has endured, the longer it is likely to last; time-tested means trustworthy.	We borrow proven credibility from our time-tested French technology, adopted across Europe.
Scarcity Principle	People value what is rare or exclusive more highly.	Genuine scarcity only: the only odour neutraliser in India, patent-protected. Never fake urgency.
Anchoring Effect	The first reference point shapes all later judgement.	We anchor on category and value, not on price.
Social Proof	People follow the actions of others, especially when uncertain.	Reviews, ratings, and our well-known clients build trust for a new brand.

Framework	Gist & spirit	How Rudione applies it
Mere Exposure Effect	Familiarity breeds preference; we like what we see repeatedly.	Consistent, repeated presence makes the brand feel familiar and trusted over time.
Recency & Frequency Bias	Recent and frequent exposures weigh most heavily in decisions.	Drives our retargeting and steady posting cadence with warm audiences.
The Rule of 7	A person typically needs about seven exposures before acting.	We plan for repeated touches across channels, not one-off campaigns.
Owned vs Earned vs Paid	Owned is what we control; earned is what others say about us; paid is what we buy. Balance all three.	Owned: our websites, email, WhatsApp. Earned: reviews, customer posts. Paid: Amazon, Google, Meta.
Content Moat	A growing body of valuable content becomes a defensible asset rivals cannot easily copy.	A two-layer library: problem-led content that captures demand, plus neutralise-vs-mask education that converts it.
Viral Loop	Product usage itself drives new users.	Shareable demo videos and customer content that spread, especially privately.
Dark Social	Much sharing happens invisibly via private messages and WhatsApp.	Especially relevant in India: we make content easy to forward privately and account for sharing we cannot track.
Visualization	Concrete, vivid images outperform abstract claims.	'No more scrubbing the toilet on your knees' beats 'saves you time'.
Falsifiability	A specific, checkable claim feels more credible than a vague boast.	We aim for specific, defensible claims, and back them with evidence.
Uniqueness	If a competitor could say the same line, it does no work for your brand.	Every key line should be true for us and not sayable by the obvious alternative.
PAS / BAB	Two copywriting recipes: PAS (Problem, Agitate, Solution) drives action; BAB (Before, After, Bridge) builds aspiration.	PAS for direct-response ads; BAB for brand and awareness content.
7 P's of Marketing	A checklist for a complete marketing mix: Product, Price, Place, Promotion, People, Process, Physical Evidence.	Used as an organising checklist across the whole strategy.

Where Each Framework Is Applied

The table below shows where each framework does its main work, so the connection between the thinking and the action is easy to see. Several frameworks also support more than one section.

Section	Frameworks that lead here
0. Executive Summary & Business Objective	Start With Why
1. Market & Competitive Analysis	Blue Ocean vs Red Ocean, Law of Category, Lindy Effect, Scarcity Principle
2. Target Audience & Segmentation	TOFU / MOFU / BOFU
3. Brand Positioning & Architecture	Purple Cow, Law of Category, Lindy Effect, Scarcity Principle, Anchoring Effect
4. Portfolio & Hero-Product Strategy	Halo Effect, Flywheel, Purple Cow
5. Pricing & Value Framing	Anchoring Effect, Scarcity Principle, 7 P's (Price)
6. Website Strategy	Owned vs Earned vs Paid, Content Moat, 7 P's (Physical Evidence)
7. Channel Strategy	Owned vs Earned vs Paid, Flywheel, Dark Social, 7 P's (Place, Promotion)
8. Content, Creative & Language	Content Moat, Visualization, Falsifiability, Uniqueness, PAS, BAB, Social Proof, Purple Cow
9. Paid Media / Performance	Rule of 7, Mere Exposure Effect, Recency & Frequency Bias, PAS
10. B2B Sales Enablement	Social Proof, Lindy Effect, 7 P's (People, Process)
11. Launch Plan & GTM Timeline	Mere Exposure Effect, Viral Loop, Scarcity Principle
12. Budget & Phasing	Concentrate-where-we-win discipline
13. Measurement, KPIs & Reporting	Flywheel, Recency & Frequency Bias
14. Governance & Compliance	Falsifiability, 7 P's (People, Process)
15. Risks & Assumptions	Scarcity Principle, Law of Category (defensive logic)

Section 0 — Executive Summary & Business Objective

0.1 In brief

Rudione is launching into the Indian odour-control and eco-hygiene market with a clear and unusual advantage: we sell products that genuinely remove odours at the source rather than covering them with fragrance, protected by patents and built on time-tested French technology. We also offer a strong range of cleaning and hygiene products. This strategy sets out how we build awareness, win customers, and grow sales across marketplaces, our own website, and business channels, for both the Leocym range we exclusively distribute and our own Rudione products.

0.2 Overarching commercial goal

To establish Rudione as a credible, growing force in India's eco-hygiene and odour-control market, and to build a profitable, scalable sales engine across marketplaces, the owned Rudione website, and business channels. This covers three product families: the Leocym range (exclusively distributed by Rudione), Rudione's own Ionemist and Ionefresh, and future Rudione-branded products still to be launched.

0.3 Marketing mandate

To position Rudione as a single trusted partner delivering both superior cleanliness and effective odour control, and to turn that positioning into measurable sales, qualified business leads, and brand awareness, all weighted equally. The mandate rests on two distinct competitive stories.

Odour neutralisation (Leocym, Ionemist and Ionefresh): these products neutralise odours at the source rather than masking them with fragrance. There are currently no direct competitors offering this technology in India, so Rudione holds an exclusive, category-leadership position to be claimed early and defended.

Hygiene and cleaning (Leocym range): competes against established players such as Ecolab, Diversey, Buzil Rossari and Satol Chemicals, winning on better quality and better value.

Marketing starts on proven channels and scales to new channels only as early results justify the spend.

0.4 Guardrails (our firm commitments)

- Lead with the neutralise-versus-mask story for odour products, and claim and defend category leadership while no competitor exists.
- For cleaning products, compete on quality and value against Ecolab, Diversey, Buzil Rossari and Satol Chemicals, without discounting and without overt price-comparison messaging.
- Given the lean budget, concentrate paid spend on a single hero product, DrainOdorkill, chosen for its no-competitor category, proven Amazon sales, and live, performing

campaign. The hero carries the science; the wider range is promoted organically and through sales collateral.

- Respect the dual-brand co-branding rules: both logos on Leocym creatives on Rudione channels; the Leocym-only logo on Leocym's own channels; the Rudione-only logo on lonemist and lonefresh.
- Keep the Leocym website informational only; the Rudione website carries sales.
- Work within an ad-spend-led budget that grows on proof, prioritising our proven channels.
- All public content is approved by Rudione before publishing; English, Hindi and Hinglish are all permitted.

Framework applied: Start With Why

***What this means:** Start With Why means leading with the deeper purpose behind what we sell, not just the features. Our why, that spaces should be genuinely clean and odour-free at the source rather than perfumed over, anchors everything that follows.*

Section 1 — Market & Competitive Analysis

1.1 The two-front market

Rudione operates in two very different competitive worlds. It helps to keep them separate, because nearly every decision that follows depends on which world we are in.

Front A — Odour neutralisation: a market with no competitors that we own

There is no other company in India offering true odour neutralisation. Competing products, such as Odonil, Godrej, Febreze and Ambi Pur, only cover up a smell with fragrance. The smell comes back, because the cause is still there. Our Leocym range and our upcoming Ionemist and Ionefresh products remove the smell at its source. This is not a slightly better product in an existing market. It is a brand-new category that we can be first in, with no competition, and our formulas are protected by patents so competitors cannot copy them. Our job is not to out-fight rivals, because there are none. Our job is to define, name, own and defend this new category.

Framework applied: *Blue Ocean, Law of Category, Scarcity Principle*

What this means: *Blue Ocean means competing in an open, uncontested market instead of a crowded one. The Law of Category means it is easier to lead a category you create than to be a better version of someone else. The Scarcity Principle means people value what is rare; being the only one in India, with patents, makes us genuinely rare.*

Front B — Cleaning and hygiene: a crowded market we win on quality and value

Our Leocym cleaning range enters an established market with serious competitors. Here we are not first. We win by being better quality and better value. The way we talk about quality and price changes depending on whether we are selling to businesses or to individual consumers, and this is explained in detail in Section 3.

In short, we point our paid advertising money and our category-building energy at Front A, where we have a patent-protected monopoly and a product that already sells, DrainOdorkill. We win Front B mainly through our sales team, proof of quality, and smart value messaging, rather than expensive advertising in a crowded space.

Framework applied: *Red Ocean*

What this means: *A Red Ocean is a crowded, competitive market where players fight over the same customers. We do not avoid it; we just win it through value and relationships rather than by outspending rivals on ads.*

1.2 Market size and opportunity

The cleaning and odour-control market in India is large and growing. The figures below are the only market-size numbers used in this strategy.

Measure	What it means	Value
TAM (Total Addressable Market)	The entire market we could theoretically serve	US\$12 billion, growing about 13% a year

Measure	What it means	Value
SAM (Serviceable Available Market)	The part we can realistically serve through our chosen channels (business, OEM, and online direct-to-consumer)	US\$2.64 to 2.85 billion
SOM (Serviceable Obtainable Market)	The part we can realistically capture in the near term	About Rs 5 crore in the first 12 months, a tiny fraction of the SAM

The message here is simple. Even capturing a tiny fraction of this huge market is a strong business. This is not a problem of market size. It is a problem of awareness and conversion, which is exactly what marketing is being brought in to solve.

1.3 Why now is the right time

Four things make this the right moment to claim the category. Cities are growing fast, so more buildings and facilities need odour and hygiene solutions. People expect higher standards of hygiene than before. Facility management is becoming more professional and wants reliable, advanced products. And rules and compliance pressures are getting stricter. At the same time, the odour-neutralisation space is still immature and fragmented, which leaves a clear and time-limited opening for us.

1.4 The odour-control market (Front A)

Almost the entire Indian odour market is built on covering up smells. People have been trained to accept 'smells better for a while' as the best they can get. Our big move is to change what customers expect, from 'how do I cover this smell?' to 'why is this smell still here at all?'

The existing brands (Odonil, Godrej, Febreze, Ambi Pur and many small local players) all rely on fragrance. Their weakness is that they cannot honestly claim to remove a smell. The moment a customer understands the difference between covering and removing, the old products look incomplete.

Our advantage is made stronger by three things: our technology has been tested over time in France and is widely used across Europe, our formulas are patented, and we are the only ones offering this in India.

Framework applied: *Lindy Effect, Scarcity Principle*

What this means: *The Lindy Effect means the longer something has worked, the more we trust it to keep working; our French technology has a long track record in Europe. The Scarcity Principle means rare things feel more valuable; being the only patented option in India is genuine scarcity.*

Our odour range is also deep and built for specific problems, which is itself an advantage. We have a precise product for each real-world smell: DrainOdorkill for drains, Urine Odrkill for urine, Waste & Garbage Odrkill for garbage, Smoke Odrkill for smoke, Meat Odrkill, Fish Odrkill, Carpcare for carpets, Urinal Care Mat, Aero Fresh, Car Fresh and Odoclr for persistent indoor smells. The old brands sell one fragrance for everything. We solve specific problems at the source.

In the automatic-dispenser refill space, competitors sell refills that only add fragrance, and some wrongly claim they remove odour. Our Ionemist and Ionefresh will be India's first refills that genuinely remove odour and add fragrance at the same time.

1.5 The cleaning and hygiene market (Front B)

In cleaning and hygiene, we have real competitors. Listed below in order of product quality, from highest to lowest, they are all business-to-business companies. They do not sell to individual consumers.

Competitor	Profile	How we win against them
Ecolab	Global leader in cleaning, water, hygiene and infection control for businesses	Our quality matches or beats theirs, and we add genuine odour neutralisation, which they do not offer
Diversey	Global scale, full institutional cleaning systems	Comparable or better quality at a price a little below theirs; eco-friendly; a closer supplier relationship
Buzil Rossari	German formulation heritage, professional channel	French heritage plus the ability to provide both cleaning and odour neutralisation from one supplier
Satol Chemicals	Indian, listed company; certified; large distributor network; well-known clients; uses an 'economy with quality' message close to ours	Better product quality and our pricing position. Note: Satol does not sell odour neutralisers, so we do not beat them on odour; they compete with us only on cleaning

Two useful notes here. First, Satol uses a message very similar to ours about being economical and good quality, so it helps not to compete on price alone. We win against Satol on better quality and our pricing position, rather than on odour neutralisation, because they do not sell odour products at all. Second, our biggest structural advantage on this front is that a single customer can get both excellent cleaning and genuine odour neutralisation from one trusted supplier. The competitors sell cleaning only.

A helpful early research task: the four competitors above sell only to businesses. For the individual-consumer cleaning market, our real competitors are different and are not yet defined. Identifying who they are, through marketplace research and the Voice of Customer work below, is one of the first things to do.

1.6 The proof we already have

This is not a launch built on hope. We start with real evidence behind us:

- We already sell to businesses every month at a healthy profit margin, which proves the business model works.

- We already serve well-known companies, including Yum!, CBRE, Siemens, DS Group, To The New, Stellar IT Park, Time Tower, Drishti, NSL Techzone, Serenia, Saraf & Partners, Delhi Airport Parking, Yaantra (Flipkart) and Bikanervala. These names build trust with new customers, both business and consumer.
- DrainOdorkill already sells on Amazon, both through ads and through natural searches, which gives us a proven product to scale.
- Our team is experienced, with leadership and sales people who have spent many years in institutional hygiene.

Framework applied: Social Proof

What this means: Social Proof means people trust what others, especially respected others, already use. Showing the well-known companies who already buy from us makes new customers feel safe choosing us too.

1.7 Strengths, weaknesses, opportunities and risks

Strengths

A patent-protected monopoly in odour neutralisation; time-tested French technology; a deep range built for specific smells; proven business sales; a list of well-known clients; a proven DrainOdorkill engine on Amazon; the ability to offer both cleaning and odour neutralisation from one supplier; and an experienced team.

Weaknesses

We are a new brand with low public awareness; our budget is lean; our own Rudione products (Ionemist and Ionefresh) are not live yet and launch next month; the market needs to be educated before it can buy; and our consumer sales depend on marketplace algorithms.

Opportunities

We can define and own a patented category before anyone else notices; even a tiny share of a huge market is a strong business; we can convert people searching for solutions to their smell problems; we can sell more products to each customer across our range; and we can grow our proven base of corporate office customers.

Risks

Competitors may try to imitate us, although patents largely block this on the odour side; Satol uses a value message close to ours on the cleaning side; our lean budget limits how fast we can educate the market; and large competitors may respond if we prove the market is real.

1.8 What this analysis tells us to do

1. Own the category before fighting for share. Spend energy defining and claiming odour neutralisation, rather than out-advertising the brands that only mask smells.
2. Concentrate our effort where we already win: DrainOdorkill, odour neutralisation, corporate offices, and Amazon.

3. Run two separate playbooks: creating a category on Front A through advertising and content, and proving value on Front B through the sales team, keeping Front B from turning into a pure price war.
4. Lead with proof. Our existing business customers and well-known clients are our strongest trust-builders.
5. Educate to convert. Problem-led content plus a clear explanation of removing versus covering is the engine that turns this open market into our market.

1.9 The discovery work to do first

Before writing any final positioning or copy, it really helps to complete two pieces of research. These feed almost every later section.

SEO, GEO and AEO — being found everywhere, by people and by machines

We would like to be found across three surfaces:

- SEO (Search Engine Optimisation): ranking on normal search engines like Google for problem searches and category searches, for example 'how to remove drain odour' or 'best odour neutraliser'.
- GEO (Generative Engine Optimisation): making sure our brands are mentioned and recommended inside AI answers, such as those from ChatGPT, Gemini and Perplexity. As more buyers ask AI tools for solutions, we want to be the answer they get.
- AEO (Answer Engine Optimisation): structuring content to win direct-answer spots, such as featured snippets and voice-assistant answers, using clear question-and-answer formats.

This is a special opportunity for us. Because we own a patented, uncontested category, we have a rare chance to become the default answer across all three surfaces before any competitor exists to compete for that spot.

Framework applied: Content Moat

What this means: *The Content Moat means building such a large, helpful library of content over time that competitors cannot catch up. Each useful article or answer is another brick in a protective wall around the category we own.*

Voice of Customer (VOC) research — learning from real customer reviews

Before writing messages, it helps to study what real customers say, in their own words. The method is fixed:

- Read at least 100 customer reviews from leading competitors and from any other products customers currently use, for example on Amazon, Flipkart and Google.
- Start with the 1-star and 2-star reviews, because these reveal the customer's pain, frustration and the exact words they use. Then read the 4-star and 5-star reviews to learn what customers most want.

- Sort every insight into four buckets, using the customer's exact words: Pain Stated (the problem in their words), Desired Outcome (what they want), Trust Signal (what made them believe and buy) and Objection or Hesitation (what held them back).
- Turn this into a VOC insight document that becomes the raw material for our positioning, messages and all copy, so we speak in the customer's language, rather than our own assumptions.

This research directly feeds our problem-led content. The problems customers complain about in 1-star reviews are exactly the searches and content topics we should target.

Agency action points

1. Complete the VOC review study and the SEO, GEO and AEO groundwork before finalising messaging.
2. Identify the individual-consumer cleaning competitors, since the named competitors sell only to businesses.
3. Keep the two playbooks separate: category creation on Front A, value-led selling on Front B.
4. Lead all materials with our proof: well-known clients and time-tested French technology.

Section 2 — Target Audience & Segmentation

2.1 How we think about audiences

We have a limited budget, so it is not realistic to market to everyone at the same time. This section describes all the types of customers we can sell to, and then puts them in order of priority, so it is clear where to spend effort and money first.

We group customers into three phases. Phase 1 is where we already have proof that we can win, so it gets the most attention and budget. Phase 2 is the next set of customers, once Phase 1 is working. Phase 3 customers are handled when the opportunity comes to us, without spending much money chasing them. We use the word 'phase' on purpose, so it is not confused with city tiers like Tier 1 and Tier 2 cities.

One important note: all the customer descriptions here are our best guess for now. They are confirmed by the Voice of Customer research described in Section 1 before any final messages are written, so that we use the words real customers use, rather than words we assume they use.

Framework applied: TOFU, MOFU, BOFU

What this means: This is the marketing funnel: the Top is awareness (people first hear of us), the Middle is consideration (they weigh us up), and the Bottom is conversion (they buy). Different content suits each stage, and this shapes each audience's journey.

2.2 Our two types of customers

We sell to two very different kinds of buyers. They think and buy differently, and need different channels, so we treat them separately throughout this document.

Business customers (B2B) are companies and institutions buying for their buildings and facilities. They take time to decide, often involve several people, buy in larger quantities, and value the relationship. We reach them mainly through LinkedIn, our direct sales team, business marketplaces like IndiaMart and Udaan, and email or WhatsApp.

Individual customers (B2C) are ordinary people buying to solve a personal problem at home. They decide quickly, are driven by the problem they want to fix, buy smaller quantities, and there are many of them. We reach them mainly through marketplaces like Amazon and Flipkart, through Meta (Facebook and Instagram), and through the Rudione website once it is live.

We use a different tone for each. For business customers the tone is professional. For individual customers the tone is friendly and approachable. We explain the science simply to both, because it builds trust with both.

2.3 Business customers, in order of priority

Phase 1 — Our main focus: corporate offices, IT parks and facility management companies

This is where we already have proof, so it is our number one priority. We have real customers and well-known names here, including companies like Siemens, CBRE and Stellar IT Park.

These customers have a clear, repeating problem. Their washrooms and common areas develop bad smells. Air fresheners cover the smell for a short while, but it always comes back, because fresheners do not remove the cause. They also need their offices to look and smell clean and premium for staff and visitors. The decision-makers are usually facility managers, admin or purchase heads, and the facility management companies that run these buildings.

We win them with three things: proof that we remove the smell rather than covering it, the convenience of getting both cleaning and odour removal from one supplier, and the trust that comes from showing the well-known companies who already use us.

Phase 2 — Next in line: hotels, hospitals and food businesses

Once Phase 1 is working well, we move to these three groups. Hotels care because a bad smell can hurt their guest reviews, so removing it protects their reputation. Hospitals and clinics have strict hygiene needs and care about products that are effective, safe and eco-friendly. Food businesses like restaurants, cafes and cloud kitchens deal with grease, drain, garbage and kitchen smells every day, a perfect match for products such as DrainOdorkill, Waste & Garbage Odorkill, GreaseBlast and KitchenKleen. We pursue these after Phase 1 is proven, to protect our focus and budget.

Phase 3 — Handle when the chance comes: cleaning contractors, retail chains and public or industrial spaces

We do not spend money chasing these customers during launch. We serve them when they come to us, for example through enquiries on IndiaMart or Udaan, or through our distributor network. The agency supports this group with sales material rather than paid campaigns, for now.

A parallel track: large-scale industrial and institutional projects

Alongside the three phases, we have one more business opportunity that works differently, so we treat it as a separate, ongoing track rather than putting it in a phase.

This is the world of large-scale industrial and institutional odour control: water treatment plants, landfills and waste sites, on-site decontamination (such as former chemical plants, refineries and metro tunnelling), heavy industries (such as petrochemicals, paper mills and slaughterhouses), and pollution control sites. Our catalogue pages 35 to 40 show this work in detail.

We do not sell to government bodies directly. Our real target is the private companies that win these government and large industrial tenders and carry out the work, such as tender-winning contractors and industrial-service companies. These companies buy and apply odour-control solutions across many projects, so they are valuable, repeat commercial customers.

This track works differently in three ways: the customers are large, the buying cycle is long and project-based, and the work is closer to a complete solution than an off-the-shelf product. Because of this, we run it as a slow, steady, relationship-led track rather than a launch-phase push. For now it is organic only, with no paid advertising. The agency's job here is to build our credibility and make us easy to find, using the industrial content from catalogue pages 35 to 40,

the business section of our websites, expert content and our client proof on LinkedIn, and case studies as we win projects. The winning of these projects is led by our senior sales team and their relationships. Once our main revenues are up and steady, we will revisit this track and test a paid campaign around it.

Framework applied: *Lindy Effect, Social Proof*

What this means: *The Lindy Effect means the longer something has worked, the more trustworthy it feels; showing that our technology already handles entire landfills proves it is more than strong enough for any smaller job. Social Proof means people trust what respected organisations already use.*

2.4 Individual customers

Main customer: the city homeowner with a specific smell problem

Our proven individual customer, based on DrainOdorkill sales on Amazon, is a city homeowner trying to fix one particular smell at home. It could be a drain that smells no matter how often it is cleaned, a bathroom that will not stay fresh, or smells from pets, urine, smoke or the kitchen that air fresheners only hide for a short time.

This customer thinks about the problem, not the brand. They search online for the problem itself, for example 'how to remove drain smell permanently', rather than a brand name. Very often they have already tried an air freshener and been let down. That disappointment is exactly our opportunity, because we can show them why our product works when fresheners did not.

We win this customer with clear, vivid content that names their exact problem, a simple explanation of why we remove the smell rather than covering it, strong reviews as proof, and a believable claim. When this customer is happy, they often buy again and try our other products for other smells. One solved problem opens the door to the whole range.

We confirm this description through the VOC review research before finalising messages. The 1-star and 2-star reviews of competitor air fresheners are expected to give us the richest, most honest language about what frustrates people.

Framework applied: *Flywheel, Halo Effect*

What this means: *The Flywheel means each happy customer and review makes the next sale easier, so momentum builds. The Halo Effect means a good experience with one product makes people trust the whole range, so one solved problem leads to more purchases.*

Second customer: lonemist and lonefresh buyers (after launch next month)

This is a slightly different buyer: someone who already uses automatic air-freshener refills at home or in a small premises. We win them by explaining that lonemist and lonefresh are India's first refills that both remove odour and add fragrance, instead of only adding fragrance. They already have the habit of buying refills, so we are simply offering them a better refill, rather than asking them to start a new habit.

2.5 A note on marketplace listings

Listing a product on a marketplace and advertising on a marketplace are two different things. Even on marketplaces where we choose not to spend money on ads at the start, we still list our products there so customers can find and buy them.

At launch, our paid advertising stays focused where we already have proof. But our products are also listed on Flipkart, Jiomart, Meesho and other relevant marketplaces, even without paid ads, so we capture customers who prefer those platforms. We can add paid advertising on these other marketplaces later, once we see which ones bring in sales.

2.6 Quick summary

Customer group	Priority	Where we reach them	Tone	Main message
Corporate offices, IT parks, facility management	Business, Phase 1	LinkedIn, direct sales, IndiaMart, Udaan	Professional	We remove smells at the source, not just cover them; cleaning and odour control from one trusted supplier; trusted by well-known companies
Hotels, hospitals, food businesses	Business, Phase 2	LinkedIn, direct sales	Professional	Protect your reputation and meet hygiene standards with products made for your specific smells
Contractors, retail chains, public or industrial spaces	Business, Phase 3	IndiaMart, Udaan, distributors	Professional	Supported with sales material, served when they enquire
Large-scale industrial projects (via tender-winning contractors and industrial-service companies)	Business, parallel track (organic only for now)	LinkedIn, direct sales, website B2B section, case studies	Professional	Our odour neutralisation is proven at the largest industrial scale, so it is more than strong enough for your projects
City homeowner with a smell problem	Individual, Main	Meta, Amazon, Flipkart, other marketplaces, website	Friendly	We finally fix the smell that fresheners only hide; backed by real reviews
Air-freshener refill users	Individual, Second (after launch)	Meta, Amazon	Friendly	India's first refill that removes odour and adds fragrance, not just fragrance

Agency action points

1. Run the VOC research first, and use it to confirm or refine the customer descriptions before writing final messages.

2. Focus launch effort on Phase 1 business customers and the main individual customer, where we already have proof.
3. Follow the channel rules: LinkedIn for business customers only; Meta mainly for individual customers; Amazon as our proven place to sell; Flipkart and other marketplaces as listings; the website as our own selling destination once live.
4. List products on all relevant marketplaces even where we are not yet paying for ads.
5. Keep the large-scale industrial track organic for now, supported with credibility content.

Section 3 — Brand Positioning & Architecture

3.1 What this section covers

This section explains two things. First, our brand positioning: what we want people to think and feel about us, and the one main idea we want to own in their minds. Second, our brand architecture: how the two brands, Rudione and Leocym, work together, including who carries which logo and where.

3.2 Our core idea: we remove smells, we don't just cover them

The single most important idea we want to own is simple. Most products only cover up bad smells with fragrance, and the smell comes back. Our products remove the smell at its source, so it actually goes away.

We want to own one category in the customer's mind: odour neutralisers. Not air fresheners, not room perfumes. We are the brand that genuinely removes odour. Everything we say should keep coming back to this one idea, because it is true, it is different, and no competitor in India can honestly say it.

This works in our favour for a special reason. We are the first and only brand offering this in India, and our formulas are patented, so competitors cannot legally copy them. We have a rare chance to become the name people automatically think of for removing smells, before any competitor exists to challenge us, and it helps to claim this position early and clearly.

Framework applied: *Purple Cow, Law of Category, Scarcity Principle*

What this means: *The Purple Cow is the idea that only a remarkable, worth-talking-about thing gets noticed. The Law of Category means it is easier to lead a category you create. The Scarcity Principle means rare, exclusive things feel more valuable, and being the only patented option in India is genuine scarcity.*

Our brand lines. At the company level we use 'Eliminating Odour, Elevating Hygiene'. For our odour products, the line customers see most often is 'Real Freshness, Not Perfume', because it captures our whole idea in three words and no masking brand can honestly say it.

Framework applied: *Uniqueness*

What this means: *Uniqueness is the test of whether a line truly belongs to us. If a rival could honestly say it too, it is not helping our brand. 'Real Freshness, Not Perfume' is a line only we can truthfully claim.*

3.3 Why people should believe us

A bold claim needs proof, or it sounds like marketing talk. We have three strong reasons that make our claim believable.

First, our odour products use technology tested over time in France and widely trusted across Europe. We are new to India, but the technology is not new to the world. This borrowed track record makes us credible from day one.

Second, our products are protected by patents. This is not only legal protection. It is also proof to the customer that what we offer is genuinely unique and unavailable anywhere else.

Third, we already have real, well-known customers using our products, including names like Siemens, CBRE and Stellar IT Park. When a customer sees that respected companies trust us, they feel safer trusting us too.

Framework applied: *Lindy Effect, Scarcity Principle, Social Proof*

What this means: *The Lindy Effect: time-tested technology earns trust. The Scarcity Principle: patents make us genuinely rare. Social Proof: respected clients reassure new customers. Together, these three give our bold claim real backing.*

3.4 How we position against the two types of competitors

We compete in two different worlds, so we position differently in each.

For our odour products, we have no direct competitor. Here we do not compare ourselves to anyone. We educate people about the difference between covering a smell and removing it, and we position ourselves as the only real solution. We are creating and leading a new category, rather than fighting for share in an old one.

For our cleaning products, we do have competitors. In order of quality from highest to lowest, they are Ecolab, Diversey, Buzil Rossari and Satol Chemicals. They are all business-to-business companies and do not sell to individual consumers. We position differently for business and individual customers.

For business customers, our quality matches or beats Ecolab, the best in the market, while our price sits a little below Diversey, the second-best premium brand. Our message is simple: you get the best quality without paying the highest price. We are not the cheap option, we are the smart premium choice.

For individual customers buying on marketplaces, our price is equal to or lower than other genuine quality products. We compare ourselves only to real quality products, not to cheap, ineffective ones. Our message here is quality you can trust at a fair or better price.

A note on Satol. Satol uses a message close to ours about being economical and good quality, so it helps to be careful. We do not beat Satol on odour neutralisation, because Satol does not sell odour neutralisers at all; they compete with us only on cleaning and hygiene. Against Satol we win on two things: better product quality and our pricing position. Our odour neutralisation strength is a separate advantage we hold over the whole market, but it is not what we use to beat Satol directly, because they are not in that category.

A note on consumer cleaning competitors. The four competitors above sell only to businesses. For the individual-consumer cleaning market, our competitors are different and not yet defined. Identifying them is an early research task, using marketplace research and the VOC work.

Framework applied: *Anchoring Effect*

What this means: *The Anchoring Effect means the first reference point shapes how people judge everything after. Rather than anchoring on a low price, we anchor on category ('a neutraliser, not a freshener') and on value, so price is judged against the right thing.*

3.5 How we want the brand to feel

We want Rudione to feel professional, trustworthy, expert and purposeful, while still being approachable for ordinary customers.

For business customers we lean towards professional and expert. For individual customers we lean towards friendly and approachable. For both, we explain the science simply, because it builds trust without sounding complicated.

We are a premium brand in terms of quality, but we are not trying to feel expensive or out of reach. For business customers our quality matches the best in the market while our price is below the premium players, so we feel like the smart premium choice. For individual customers our price is fair or better than genuine quality alternatives. In both cases we feel like high quality and good value at the same time.

3.6 Our brand architecture: how Rudione and Leocym work together

This is one of the most important parts of the strategy, and these rules are firm commitments that come from a business obligation.

We have two brands. Rudione is our own company and brand, and it is also the exclusive distributor of Leocym products in India. Leocym is the brand of the products we import and distribute. Some products are Leocym products, and some are our own Rudione products, such as Ionemist and Ionefresh. We keep both brands visible in the right way, depending on the product and the channel.

1. Leocym products on Rudione's channels: when we promote a Leocym product on any Rudione channel (social media, website or ads), the creative carries both logos, Rudione and Leocym, together.
2. The same Leocym creatives on Leocym's own channels: the same creatives are posted on Leocym's own social channels, but with only the Leocym logo, not the Rudione logo.
3. Rudione's own products: Ionemist and Ionefresh carry only the Rudione logo, because they are Rudione products, not Leocym products.

What we are promoting	On which channel	Which logo or logos to use
A Leocym product	Any Rudione channel (social, website, ads)	Both logos: Rudione and Leocym
A Leocym product	Leocym's own social channels	Only the Leocym logo
A Rudione product (Ionemist, Ionefresh)	Any Rudione channel	Only the Rudione logo

3.7 The role of each brand in the customer's mind

Rudione is the trusted company that solves odour and hygiene problems in India. It is the name customers buy from, the name on our own website where products are sold, and the brand that ties everything together. Over time, Rudione is the brand we build the most, because it carries our own future products too.

Leocym is the respected product brand we distribute, with its French, time-tested technology. On Rudione's channels it appears alongside Rudione to show the partnership. It also has its own informational presence, explained in Section 6 on website strategy.

Agency action points

1. Make every key message come back to one core idea: we remove smells at the source, we do not just cover them.
2. Support bold claims with our three proof points: time-tested French technology, patents, and our well-known clients.
3. For odour products, educate and lead the category rather than comparing to competitors. For cleaning products, position on quality and value, keeping it from becoming only a price fight, especially against Satol.
4. Identify the individual-consumer cleaning competitors as an early research task.
5. Follow the logo rules in the table in section 3.6 exactly, on every creative, without exception.
6. Keep the tone professional for business customers and friendly for individual customers, explaining the science simply to both.

Section 4 — Portfolio & Hero-Product Strategy

4.1 What this section does

This section organises our full product range into a simple structure, so it is clear which products to push hardest, which to support, and which to keep available in the background. It also explains our hero-product approach: putting our limited paid advertising money behind one proven product, and letting that product's success lift the whole range.

4.2 The three layers of our portfolio

Layer 1 — The Hero (gets the paid advertising money): DrainOdorkill

DrainOdorkill is our single hero product. It is the one product we put our paid advertising budget behind.

We chose it for three solid reasons. It sells in a category with no direct competitor, so our money is not wasted fighting rivals. It already has proven sales on Amazon, both from ads and from natural searches, so we are scaling something that already works, rather than gambling on something new. And there is a working, running campaign we can build on, instead of starting cold.

There is a bigger purpose behind the hero. DrainOdorkill is not just a product we sell. It is the proof of our whole big idea: that we remove smells at the source instead of covering them. When a customer sees a stubborn drain smell actually disappear, they become a believer in the science. That belief makes them open to trying our other products for other smells. The success and trust earned by one product spreads to the whole range.

Framework applied: *Halo Effect*

What this means: *The Halo Effect means a strong positive impression of one product spills over onto everything around it. DrainOdorkill's proven success makes people trust the whole range.*

This also starts a cycle that feeds itself. Paid advertising brings sales. Sales bring reviews and better marketplace ranking. Better ranking brings more natural sales, which bring more reviews, and so on. Each happy customer makes the next sale easier and cheaper.

Framework applied: *Flywheel*

What this means: *The Flywheel means momentum that builds on itself: each sale and review makes the next one easier, so the wheel spins faster over time with less push.*

Layer 2 — The Supporting Stars (pushed mainly through free, organic content)

These are nine products in total: seven Leocym stars and our two own Rudione stars, Ionemist and Ionefresh. We actively promote them, but mainly through free organic content such as social posts, problem-led articles, videos and reviews, rather than paid ads. We chose each one because it solves a specific, painful problem that almost no other product solves. Each is, in its own small way, a remarkable product worth talking about, and most have no real competitor for their exact use, so each is its own small uncontested market.

Framework applied: *Purple Cow, Blue Ocean, Law of Category*

What this means: The Purple Cow means each star is remarkable in its niche. Blue Ocean and the Law of Category mean each star owns a use-case with no real competitor, so it leads a small category of its own.

The four odour stars:

Urine Odrkill. It removes the smell from urine. In the business market there is no specific product for urine smell apart from perfumes that only cover it. In the consumer market, existing products are only for dog urine smell. Our product works for both dog urine and human urine, which makes it valuable for homes with babies or elderly family members. No one else offers this for human urine, so we own this need completely.

Waste & Garbage Odrkill. It removes the smell from waste and garbage at its source. There is no product in either the business or consumer market that treats garbage and dustbin smell at the source. Everything else just covers it. Again, we are the only real solution.

Smoke Odrkill. It removes the smell left behind by smoking. For a hotel with smoking rooms, the only thing staff can do today is use perfumes, sprays or diffusers that hide the smell for a while. Ours is the only product that actually removes the smoke smell. For consumers, picture a father who smokes in his car and then has to drop his children to school the next morning in that same car. Our product removes the smell, it does not just mask it.

Car Fresh. It keeps a car free of odour without strong perfume. Picture people who get headaches or feel sick from strong car perfumes, cab drivers who get headaches from passengers' perfumes, passengers tired of a driver's body odour, or families who eat food in the car. Our product is an odour neutraliser, not a perfume. The user will not even notice it is there, but it keeps working quietly in the background.

The two Rudione stars (live from next month):

Ionemist and Ionefresh. These are our own Rudione-branded automatic air-freshener refills. They launch next month, so during launch week they are stars-in-waiting, and they become active stars the moment they go live. Every automatic refill sold in India today only adds fragrance, and some brands wrongly claim theirs also remove odour. Ionemist and Ionefresh are India's first refills that genuinely remove odour and add fragrance at the same time. Because people who own automatic dispensers already buy refills regularly, we are not asking them to change their habit, we are simply giving them a better version of what they already buy. These two are strategically special: they are our first products that are purely our own, not products we distribute, and they carry our future. So while DrainOdorkill leads our paid advertising today, Ionemist and Ionefresh are the first proof that the Rudione brand itself leads this category. Their launch is treated as an important brand moment. One logo reminder: unlike the Leocym stars, these two carry only the Rudione logo.

The three cleaning stars:

ScaleXpert. It removes the toughest stains. It may be the only product in India that can remove gutka stains. It also removes hard-water stains and rust stains on steel fittings in washrooms. A huge number of Indian homes struggle with hard-water deposits and stains in their bathrooms because of the hard water across India, so this solves a problem almost everyone recognises.

GreaseBlast and KitchenKleen. These are two faces of the same job: removing grease and oil. GreaseBlast is the business version, KitchenKleen is the consumer version. You simply spray it on chimneys, hoods, appliances, tiles or floors, and the grease and oil deposits come off. We have tested GreaseBlast against several brands, and ours performed far better than the rest.

FreshClean. This is our everyday floor cleaner, and its real target is to replace phenyl. Many Indian homes use phenyl. FreshClean costs the same or less, but it can be used safely on marble and tiles, which phenyl cannot. It is highly effective and easy on the pocket. We frame FreshClean clearly as the better, surface-safe, similarly-priced replacement for phenyl, and treat phenyl, rather than any particular brand, as the thing we are competing against.

Layer 3 — The Background Catalogue (kept available, promoted as a group)

These are the rest of our products. They are listed and available everywhere we sell, and they appear in range-level content like 'our full odour range' posts or catalogues, but they do not get individual campaigns during launch. They benefit from the halo of the hero and the stars. Examples include Meat Odrkill, Fish Odrkill, Carpcare, Urinal Care Mat, Aero Fresh, Odoclr, and the wider cleaning range such as MaxScrub, DeepClean, NatureClean, ShineX, EssentialX BioClean, EssentialX PureClean, OvenWonder MaxPower, DrainFlow and CarShine.

4.3 How the layers work together

The strategy is simple to picture. The hero, DrainOdorkill, gets the paid money and proves our science to the market. The stars get free, problem-led content, and each one captures a specific painful need that nobody else serves. The background catalogue stays available and rides the trust built by the hero and the stars. As customers come in through the hero or a star, and as they learn to trust us, they discover the rest of the range and buy more across it. One solved problem leads to the next purchase.

***Framework applied:** Halo Effect, Flywheel*

***What this means:** Together, the Halo Effect (trust spreading from the hero to the range) and the Flywheel (each sale making the next easier) pull the whole portfolio along behind one proven product.*

4.4 A note on the 7 P's: Product

This section handles the 'Product' part of the 7 P's of marketing. Our product strategy is clear: one proven hero to lead, a focused set of remarkable stars that each own a specific need, and a supporting catalogue. The other P's are handled in their own sections: Price in Section 5, Place and Promotion in Section 7, People and Process in Section 10, and Physical Evidence in Sections 6 and 8.

***Framework applied:** 7 P's of Marketing — Product*

***What this means:** The 7 P's are a checklist to keep a marketing plan complete. 'Product' asks whether we have the right products, structured the right way; our hero, stars and catalogue answer that.*

4.5 Important reminder on logos

Most of our stars and the hero are Leocym products, so all the logo rules from Section 3 apply. When we promote any Leocym product (including DrainOdorkill and the odour stars) on Rudione's channels, the creative carries both the Rudione and Leocym logos. The same creative on Leocym's own channels carries only the Leocym logo. Only Ionemist and Ionefresh carry the Rudione logo alone.

Agency action points

1. Put the paid advertising budget behind DrainOdorkill first, and treat it as the proof of our whole 'remove, don't cover' idea.
2. Promote the supporting stars mainly through free, problem-led content, leading each with the specific, vivid problem it solves.
3. Treat the launch of Ionemist and Ionefresh next month as a key brand moment, with the Rudione-only logo.
4. For GreaseBlast and KitchenKleen, treat them as one grease-removal story with a business face and a consumer face.
5. For FreshClean, position it as the surface-safe, similarly-priced replacement for phenyl, aimed against phenyl itself.
6. Keep the background catalogue listed and available everywhere, and include it in range-level content, without individual campaigns during launch.
7. Apply the logo rules from Section 3 to every product creative.

Section 5 — Pricing & Value Framing

5.1 What this section does

This section explains how we talk about price. It does not list actual prices. Instead, it gives clear rules for how to position our pricing in messaging, so that every piece of communication supports our value, protects our quality image, and avoids turning into a cheap-product price war. Actual price points stay internal and are set separately by the business.

5.2 Our core pricing principle: we sell value, not a discount

We are a premium-quality brand. Our prices are competitive, and in many cases better than rivals, but we do not want price to be the first thing a customer hears about us. The first thing they should hear is what our product does that others cannot: remove smells at the source, and clean better.

We hold our price with confidence. We do not run discounts, price-off offers, or 'cheapest in the market' messaging. Discounting would weaken the premium quality image we are building and would draw us into a fight on price, which is exactly the fight a value competitor like Satol would welcome. We win by making the customer feel the product is worth it, rather than by being the cheapest.

We do not discount to drive sales. The only exception is legitimate review incentives, used to earn early, honest reviews that power our Amazon ranking. These must follow marketplace and advertising rules, and must never involve paying for positive reviews or using fake reviews.

5.3 We anchor on category and value, not on price

When a customer has nothing to compare a price against, the price feels random. So we give them the right thing to compare against first.

We never anchor on price (for example, 'only Rs X'). Instead we anchor on two things. First, the category: this is an odour neutraliser, not an air freshener, so the customer compares us to 'a product that actually removes the smell', not to a cheap freshener. Second, value: we anchor on the cost of the problem and the cost of the alternatives that do not work. A customer who has bought freshener after freshener and still has the smell has already spent a lot of money on a problem that was never solved. Against that, our product is good value, even before we mention our price. For business customers, we anchor on total cost and reliability rather than unit price: a product that works the first time and removes complaints is cheaper in the long run than a cheap product that does not work.

Framework applied: *Anchoring Effect*

What this means: *The Anchoring Effect means the first reference point shapes all later judgement. By setting the comparison as category and value, rather than a low price, the customer judges us against 'does it actually work', which is where we win.*

5.4 How we frame price for each market

Business customers, cleaning products. We frame ourselves as the smart premium choice. Our quality matches or beats Ecolab, the best in the market, while our price sits a little below Diversey. The message is: you get the best quality without paying the highest price. We do not say 'cheap', we say 'best quality, smarter price'.

Individual customers, cleaning products. Our price is equal to or lower than other genuine quality products, comparing only against real quality products. The message is: quality you can trust at a fair or better price. We still lead with what the product does, then support it with fair pricing.

Odour products, both markets. We have no direct competitor, so there is no rival price to compare against. We do not talk about price first at all. We talk about the result (the smell is gone, not covered) and let the value speak for itself. The customer's real comparison is the freshener that failed them, which makes our value obvious without pushing price.

5.5 Genuine scarcity supports our price

People value what is rare. We have real reasons to be valued more, and these support our price without any discounting. We are the only brand in India offering true odour neutralisation. Our technology is imported from France and trusted across Europe. Our formulas are patented and cannot be copied. These are genuine, true reasons we are special, and they justify a premium-quality position. We use only real scarcity, never fake scarcity. We do not use false 'limited stock' or 'sale ends tonight' tricks, which would clash with our honest, premium, no-discount image. Our scarcity is the truth that no one else can do what we do.

***Framework applied:** Scarcity Principle*

***What this means:** The Scarcity Principle means people value rare and exclusive things more. We rely only on genuine scarcity (the only one in India, patented), never on fake urgency, which would damage trust.*

5.6 The 'Price' part of the 7 P's

This section handles the Price element of the 7 P's of marketing. Our pricing approach in one line: competitive, confident, never discounted, always framed through value and quality rather than through a low number.

***Framework applied:** 7 P's of Marketing — Price*

***What this means:** In the 7 P's checklist, 'Price' is about how we price and how we talk about price. Ours is premium quality at a smart price, communicated through value, not through discounts.*

Agency action points

1. Never lead with price. Always lead with what the product does, then support it with value.
2. Never run discounts or 'cheapest' messaging. The only exception is honest review incentives that follow the rules.
3. Anchor every message on category and value, reminding customers of the cost of the problem and of products that did not work.

4. For business cleaning products use 'best quality, smarter price'; for individual cleaning products use 'quality you can trust at a fair or better price'; for odour products do not lead with price.
5. Use our genuine reasons for being special to support the price, and never use fake scarcity or false urgency.

Section 6 — Website Strategy

6.1 What this section does

This section explains the role of our two websites, what each one contains, and how they support the wider strategy. We have two websites that do two different jobs, and it is important to keep these jobs separate.

6.2 The two websites and their two jobs

The Rudione website is our selling website. This is where customers actually buy our products. It carries both an individual-customer (B2C) section and a business-customer (B2B) section. It is built by the agency and goes live next month. A 'coming soon' page is already active on the Rudione web address until the full site is live.

The Leocym website is an information-only website. It does not sell anything. Its job is to inform, to tell the Leocym story, and to point people to where they can buy. It also carries both a B2C and a B2B section. It is built by the agency. Both websites are built together.

Both websites are owned media, meaning channels we fully control. Unlike rented space such as a marketplace or a social platform, we own these completely, so they are the safest long-term home for our brand story and our content.

Framework applied: *Owned vs Earned vs Paid media*

What this means: *This framework says there are three kinds of channels: owned (we control them, like our websites), earned (others talk about us, like reviews), and paid (ads we buy). A healthy brand uses all three, and our websites are owned media, our safest long-term home.*

6.3 What the Leocym website must contain

The Leocym website is for information only, with these parts:

1. The brand story, including the French origin and the time-tested, Europe-trusted technology.
2. The full product catalogue, shown as information only, with no option to buy.
3. A 'where to buy' section that links to the Rudione website. The Leocym website sends all buying traffic to the Rudione website, which we own and control, rather than to Amazon. This keeps the customer relationship with us and avoids marketplace fees on traffic we generated ourselves.
4. A business enquiry and contact form, so business customers can reach out.
5. Certifications and safety information, to build trust and support compliance.

The Leocym website carries only the Leocym logo, in line with the brand rules in Section 3, and stays information-only, because keeping it that way is a business obligation.

6.4 What the Rudione website must contain

The Rudione website is our selling website and our most important owned channel. It contains:

1. A B2C (individual customer) section, where consumers can buy our products easily.
2. A B2B (business customer) section, described further below.
3. Our content moat: the problem-led articles and the 'removing versus covering' education, so the website doubles as our engine for being found on search and AI tools.
4. Our proof: reviews, well-known client names, certifications and the brand story.
5. Clear logo treatment following Section 3: both logos on Leocym products, and the Rudione-only logo on Ionemist and Ionefresh.

Because the Rudione website hosts our content moat, it is not just a shop. It is where we build the library of helpful content that makes us the default answer to odour problems over time, on Google and on AI tools. This is one of the most valuable long-term assets we can build, because a deep library of helpful, ranked content is very hard for a competitor to copy.

Framework applied: *Content Moat, 7 P's (Physical Evidence)*

What this means: *The Content Moat is a growing library of helpful content competitors cannot easily copy. Physical Evidence, from the 7 P's, is everything tangible a customer sees (like our website) that shapes their impression, so it must look credible and premium.*

6.5 The B2B section on both websites

Both websites carry a business-customer (B2B) section. This section uses the industrial and large-scale use content from pages 35 to 40 of our catalogue. This content shows that our odour neutralisation works not only in offices and homes, but also at a large industrial scale.

The industrial content covers serious, large-scale uses, including waste water and water treatment plants, waste and landfill sites, on-site decontamination (such as former chemical plants, refineries and metro tunnelling), heavy industries (such as petrochemicals, paper mills, slaughterhouses and automotive plants), and pollution control sites. For each, the catalogue shows the areas of use and the techniques used.

This content does an important job. It proves the strength and credibility of our technology. A facility manager who sees that the same technology handles an entire landfill or water treatment plant will trust it completely for their washrooms. So even though this large-scale industrial work may not be our day-to-day selling focus, showing it builds powerful trust for all our business customers.

Framework applied: *Social Proof, Lindy Effect*

What this means: *Social Proof and the Lindy Effect both build trust: showing serious, large-scale, long-proven uses makes the technology credible for every customer, even those with much smaller needs.*

6.6 How the two websites work together

The two websites support each other. The Leocym website informs people and builds trust in the Leocym brand and its French heritage, then sends buyers to the Rudione website to purchase. The Rudione website is where the sale happens and where our content library lives. Together they cover the full journey: learn about the technology on either site, then buy on Rudione.

Agency action points

1. Build the Leocym website as information only, with the five parts in 6.3, carrying the Leocym logo only, and keep it from becoming a selling site.
2. Build the Rudione website as our selling site, with a B2C section, a B2B section, our content moat and our proof, following the logo rules from Section 3.
3. Build both websites together.
4. Use the industrial content from catalogue pages 35 to 40 to build the B2B section on both websites.
5. Make the Rudione website the home of our problem-led content and 'removing versus covering' education, so it works as our search and AI discoverability engine.
6. Ensure the Leocym website sends buying traffic to the Rudione website, not to Amazon.

Section 7 — Channel Strategy

7.1 What this section does

This section brings together all our channel decisions into one clear map. It shows which channel does which job, who each one targets, whether it costs money (paid) or is free (organic), and in what order we switch them on. Everything here follows decisions made in earlier sections; this is the single place to see the whole picture.

7.2 The three kinds of channels

We sort every channel into three types. Owned channels are ones we fully control: our Rudione website, the Leocym website, our email list, and our WhatsApp contacts. Earned channels are when other people talk about us without us paying them: customer reviews, ratings, and content that real customers post themselves. Paid channels are where we pay for reach: Amazon ads, Google ads, and Meta ads.

Framework applied: Owned vs Earned vs Paid media

What this means: There are three kinds of channels: owned (we control), earned (others say about us), and paid (we buy). We lean on owned and earned to keep costs low, and use paid where it clearly pays off.

7.3 Our guiding rule: concentrate paid money where we already win

Our budget is lean, so we do not spread paid money thinly across every channel. We concentrate it where we have proof, focused on our hero product, DrainOdorkill. Everything else is grown organically, through free content and earned trust, until results justify spending more.

7.4 The channel map

Amazon (paid and organic, individual customers). Our proven place to sell to individual customers. Sales here also create reviews and better ranking, which bring more free sales over time.

Google Ads (paid, both customer types). Already running. Google catches people at the moment they search for their problem, for example 'how to remove drain smell'.

Meta, meaning Facebook and Instagram (paid and organic). Our main channel for reaching individual customers, using problem-led posts, demo videos and ads shown again to interested people. Meta also supports business customers in a small, secondary way.

LinkedIn (organic, business customers only). Our channel for business customers: expert content, our well-known clients, the problems we solve, and support for the large-scale industrial track. Not used for individual customers.

YouTube (organic, both customer types). A real content channel from launch, with demo videos and problem-led explainers. We make these videos anyway for our other channels, so the same content also lives on YouTube at no extra cost, and acts as our video library.

Our websites (owned). The Rudione website is where customers buy and where our content library lives. The Leocym website informs people and sends buyers to the Rudione website. Full detail is in Section 6.

Other marketplaces: Flipkart, Jiomart, Meesho and more (listings now, paid later). We list our products on these so customers who prefer them can find and buy us, even though we do not advertise there at the start.

Business marketplaces: IndiaMart and Udaan (organic and lead-based, business customers). These bring us business enquiries and leads, which our sales team follows up.

Email (owned, used as the audience grows). We collect email contacts and use email to keep customers informed and bring them back. It becomes more useful as our audience grows.

WhatsApp Business (owned, ready, activates once we have an audience). Already set up. We use it to reach and re-engage customers once we have built a contact list. It is powerful in India, so we prepare it now and switch it on once there are enough contacts.

Customer reviews and user content (earned). Our most trusted marketing. For now we encourage real customers to post and review (organic), and we do not pay influencers yet. We may add paid influencers in a later phase.

7.5 How the channels work together: the flywheel

Our channels are not separate islands. They feed each other in a cycle that builds momentum. Paid ads on Amazon bring the first sales. Those sales bring reviews and better ranking, which bring more free sales. Happy customers post their own content and tell others, including privately. Our free content on Meta, YouTube and the website keeps pulling new people in, who then buy and add more reviews. Each turn of the wheel makes the next turn easier and cheaper.

Framework applied: Flywheel

What this means: The Flywheel is momentum that feeds itself: each happy customer and each review makes the next sale easier, so the wheel spins faster over time with less push.

7.6 A note on invisible sharing (Dark Social)

A lot of sharing in India happens privately, where we cannot see or measure it, especially on WhatsApp. Someone sends a friend a link or a video of a smell being removed, with a message like 'this actually works'. We cannot track these private shares, but they are powerful and trusted. So we deliberately make content that is easy and satisfying to share privately, such as short before-and-after demo videos, and we accept that some of our growth will come from sharing we cannot measure.

Framework applied: Dark Social

What this means: Dark Social is all the sharing that happens in private, like WhatsApp messages, which tracking tools cannot see. It is invisible but influential, so we create forwardable content and remember that not all results show up neatly in reports.

7.7 The order we switch channels on

1. At launch: Amazon (paid, hero product), Google (paid, continue), Meta (paid and organic, begins posting), LinkedIn (organic, business), YouTube (organic content), the websites (built together, live next month), and listings on other marketplaces.
2. As the audience grows: email and WhatsApp become active, since they need a contact list to be useful.
3. As results justify it: paid advertising expands to other marketplaces and possibly to paid influencers, and we test a paid campaign for the large-scale industrial track once revenues are steady.

7.8 The 'Place' and 'Promotion' parts of the 7 P's

This section handles two parts of the 7 P's. Place is about where customers can find and buy us: our websites, Amazon, Flipkart and the other marketplaces, and our business channels. Promotion is about how we reach and persuade them: our paid ads, our organic content, and our earned reviews and word of mouth.

Framework applied: 7 P's of Marketing — Place and Promotion

What this means: In the 7 P's checklist, Place asks 'where do people find and buy us?' and Promotion asks 'how do we reach and convince them?' This section answers both.

Agency action points

1. Concentrate paid money behind the hero product, and avoid spreading paid spend thinly.
2. Use LinkedIn for business customers only, and Meta mainly for individual customers.
3. Treat YouTube as a real content channel, reusing the videos made for other channels at no extra cost.
4. List products on Flipkart, Jiomart, Meesho and other marketplaces now, and add paid advertising there only once they show promise.
5. Prepare email and WhatsApp now, and activate them once we have built up an audience.
6. Encourage organic reviews and customer content, without paying influencers yet.
7. Make content that is easy and satisfying to share privately, especially for WhatsApp.
8. Follow the switch-on order in 7.7, and keep the large-scale industrial track organic until revenues are steady.

Section 8 — Content, Creative & Language Strategy

8.1 What this section does

This section is the creative engine room. It explains what content we make, how we write it, what language we use, and the rules every piece of creative follows. It is written so that anyone on the team, including a junior writer or designer, can pick it up and produce work that fits the brand.

8.2 Our content pillars

To keep our content focused and consistent, we organise everything into five repeating themes, called content pillars. Every piece of content should fit into one of these.

Pillar A — Problem-led content ('the smell that won't go away'). Content built around the exact problems customers search for and complain about, in their own words. This is our biggest traffic-puller, because people search for their problem, not for our brand. The exact problems come from the VOC research.

Pillar B — The neutralise-versus-mask education. Content that explains the core idea: most products only cover a smell, while we remove it at the source. This is the 'aha moment' content that makes our whole category make sense.

Pillar C — Proof and social proof. Content that makes people believe us: reviews and ratings, before-and-after results, the well-known companies who use us, certifications, and the French technology.

Pillar D — Product-in-action demos. Content that shows the product working: short demo videos and clear visuals of a smell or stain being removed. These are also our most shareable content, including on WhatsApp.

Pillar E — The French technology and heritage story. Content about where our technology comes from: tested over time in France and trusted across Europe. It borrows credibility from a long, proven track record.

8.3 The five pillars and the frameworks behind them

These pillars are not random. Pillars A and B together build our content moat: Pillar A captures the demand that already exists, and Pillar B converts it by explaining our answer. Pillar C is built on Social Proof. Pillar D is built on Visualization and is our most remarkable, share-worthy content. Pillar E is built on the Lindy Effect.

***Framework applied:** Content Moat, Social Proof, Purple Cow, Visualization, Lindy Effect*

***What this means:** The Content Moat is a growing library competitors cannot copy. Social Proof means people trust what others use. The Purple Cow is remarkable, share-worthy content. Visualization means concrete images stick. The Lindy Effect means time-tested technology earns trust.*

8.4 The three tests every important line of copy must pass

Test 1 — Visualization: can the reader picture it? If the reader cannot picture what we describe, they will not remember it or act on it. 'Saves you time' is abstract and weak. 'Get your evenings back' is better. 'No more scrubbing the toilet bowl on your knees' is vivid and visual.

Framework applied: Visualization

What this means: Visualization is the principle that people remember and act on concrete mental pictures, not vague ideas. The more clearly the reader can 'see' it, the stronger the copy.

Test 2 — Falsifiability: is the claim specific enough to be checked? A claim that could in theory be proven wrong feels honest and bold. 'Best cleaner in India' cannot be checked and sounds like fluff. 'Removes the smell at the source, so it does not come back' is specific and believable.

Framework applied: Falsifiability

What this means: Falsifiability is the idea that a bold, specific, checkable claim feels more believable than a vague boast. We aim for specific over vague, and back specific claims with evidence.

A very important rule sits with this test. We currently have no laboratory test data, so we are careful with number-based claims. The specific claims already approved by the company may be used as written: that we are the only product in India that removes gutka stains; that we are the only real solution that removes human urine, garbage and smoke smells at the source; and that our GreaseBlast was tested as performing far better than other brands. However, new specific or number-based performance claims (for example, 'kills 99.9% of bacteria in 60 seconds') should not be introduced without either real evidence or written approval from Rudione. Over time we plan to commission proper testing so we can use stronger, number-based claims safely.

Test 3 — Uniqueness: could a competitor say the same line? If a competitor could say the exact same sentence about their product, the line is doing no work for us. A value competitor like Satol can also say 'economical and good quality', so that line is weak. Only we can say 'removes odour at the source with patented French technology', so that line is strong.

Framework applied: Uniqueness

What this means: Uniqueness is the test of whether a line truly belongs to us. If a rival could honestly say it too, it is not helping our brand.

8.5 The two copywriting formulas

PAS — Problem, Agitate, Solution. Use for direct, action-driving ads. State the problem, agitate it (make the cost of not solving it feel real and urgent), then present our product as the solution. Best for performance and direct-response ads such as Amazon, Meta and Google. It pairs naturally with the pain-led insights from the 1-star and 2-star reviews.

For example: Your bathroom still smells, even right after you have cleaned it (problem). Guests notice it the moment they walk in, and no amount of spray hides it for long (agitate). DrainOdorkill removes the smell at its source, so it actually goes away (solution).

BAB — Before, After, Bridge. Use for brand and aspirational content. Describe the frustrating Before, paint the aspirational After, then position our product as the Bridge. Best for

brand-building and awareness content on social media and the website. It pairs naturally with the desire-led insights from the 4-star and 5-star reviews.

For example: Right now, you light a candle and open a window, and the smell still creeps back (Before). Imagine a home that simply smells clean, all day, without you thinking about it (After). That is what an odour neutraliser does, because it removes the smell instead of covering it (Bridge).

Framework applied: *PAS and BAB copywriting formulas*

What this means: *PAS and BAB are two recipes for persuasive writing. PAS leads with pain and urgency to drive immediate action. BAB leads with a hopeful picture of a better life to build brand desire. We match the recipe to the job.*

8.6 Language: English, Hindi and Hinglish

We use language to match the audience and the moment. For business customers and all LinkedIn content, we use English only. For individual customers, we use English generally when explaining the company and the products, because it reads as clear and trustworthy, and we use Hinglish (a natural mix of Hindi and English) when creating problem-led content, because that is where everyday relatability matters most. The VOC research then guides the exact mix within these rules, using the real words customers use.

8.7 Creative rules tied to the brand

Every piece of creative also follows the brand rules from earlier sections. It comes back to our one core idea, that we remove smells at the source rather than covering them, and where relevant uses our lines 'Eliminating Odour, Elevating Hygiene' at the company level and 'Real Freshness, Not Perfume' for odour products. It follows the logo rules from Section 3 exactly, and matches the tone rules: professional for business customers, friendly for individual customers, with the science explained simply to both.

8.8 A note on Physical Evidence in the 7 P's

Our content and creative are part of what marketers call Physical Evidence, which is everything tangible a customer sees that shapes their impression of us: our visuals, our demo videos, our website, our reviews, our packaging and our certifications. All of it should look and feel consistent, credible and premium.

Framework applied: *7 P's of Marketing — Physical Evidence*

What this means: *Physical Evidence, one of the 7 P's, is all the visible, tangible proof a customer experiences. It quietly tells them whether we are trustworthy and premium, so it must always look consistent and credible.*

Agency action points

1. Organise all content into the five pillars (A to E), and make sure every piece has a clear job.
2. Use Pillars A and B together to build the content moat: capture problem-searchers, then convert them with the neutralise-versus-mask explanation.

3. Run every key line of copy through the three tests: can the reader picture it, is the claim specific and checkable, and could a competitor say the same line.
4. Use only the company-approved specific claims, and introduce no new number-based or performance claims without evidence or written approval.
5. Use PAS for direct, action-driving ads, and BAB for brand and aspirational content.
6. Follow the language rules: English for B2B and LinkedIn; English for B2C company and product explanations; Hinglish for B2C problem-led content; and let the VOC research fine-tune the mix.
7. Follow all brand, logo and tone rules from Section 3 on every piece of creative.
8. Keep all visible content, packaging and proof consistent, credible and premium.

Section 9 — Paid Media / Performance Plan

9.1 What this section does

This section explains how we spend our paid advertising money. Our budget is lean, so the guiding idea throughout is discipline: spend where we win, test carefully, and grow what works.

9.2 The honest reality of a lean budget, and a one-month discovery test

Our paid advertising budget is under fifty thousand rupees a month, split across three channels. This is tight, which is exactly why discipline matters. For the launch month, we run a deliberate test across all three channels, sending purchase traffic to Amazon, to find which channel performs best for us. After that month, we concentrate our money on the winner. In other words, we spend one month finding where we win, then pour money there.

9.3 The repetition principle behind our ads

People rarely buy the first time they see an ad. They usually need to see a brand several times before they trust it and act. Three connected ideas guide how we plan our ad frequency. The Rule of 7 says a person typically needs about seven encounters before acting. The Mere Exposure Effect says people come to like and trust what they see repeatedly. Recency and Frequency Bias says the most recent and most frequent things we see weigh most in our decisions. Together, these mean we keep showing our ads again to people who have already shown interest (retargeting), and we keep a steady, consistent presence rather than spending everything in one short burst. Our free content adds more touches, for free, on the way to that seventh exposure.

Framework applied: *Rule of 7, Mere Exposure Effect, Recency and Frequency Bias*

What this means: *The Rule of 7: people need roughly seven encounters before acting. The Mere Exposure Effect: we trust what we see repeatedly. Recency and Frequency Bias: recent, frequent reminders influence decisions most. All three tell us to show up repeatedly and consistently, especially to warm audiences.*

9.4 Suggested starting budget split

Below is a suggested split for the launch month, with reasoning. These are starting points to apply and then adjust based on results, not fixed forever. The actual amounts sit within the under-fifty-thousand monthly budget.

Channel	Suggested share	Why
Meta (Facebook and Instagram)	About 40%	We commit to Meta upfront, because we believe it has strong potential to scale. We give it a real budget from the start to build audience and drive sales, not a token test.
Google (Search, plus a Shopping test)	About 30%	Already running and catches people searching for their problem. In our own past testing, Google keywords drove sales well, with the click on Google and the

Channel	Suggested share	Why
		purchase on Amazon. We give it a strong share, while letting the agency test it fresh.
Amazon (DrainOdorkill)	About 30%	Our proven selling platform, where sales also build reviews and ranking. Google and Meta purchase traffic also lands here for now, so a strong listing helps every channel.

Run this split for one month, measure honestly, then concentrate budget on whichever channel delivers the best return, with Rudione's approval.

9.5 The Amazon plan

Amazon is our proven selling platform. The plan is to scale what already works rather than start new things. The agency reviews and optimises the existing DrainOdorkill campaign and listing first: improving the targeting, keywords, images and listing so that each rupee brings more sales. Because Google and Meta purchase traffic also lands on the Amazon listing for now, a strong listing helps every channel. We do not spread Amazon spend across many products at the start; we make the hero win first, and new Amazon campaigns for other products come later. The ad copy and listing follow the PAS formula from Section 8.

9.6 The Google plan

Google has been running on and off, directing customers to our Amazon storefront, and is currently Search ads only. The agency reviews these existing campaigns, fixes what is weak, and optimises them, rather than starting from scratch. We continue Search ads focused on high-intent problem searches. We also test Google Shopping ads with a small part of the Google budget, because Shopping ads show the product photo and price at the top of search and usually convert better for physical products. Shopping ads need a Google Merchant Center product feed set up properly, which is a small setup task for the agency. We treat Shopping as a test first, then scale it if it performs.

9.7 The Meta plan

Meta launches next week, and we have no audience there yet, so we pursue two goals at once. First, awareness and audience-building: we run problem-led content and demo videos to introduce the brand, gather data, and build an audience of people who engage with us. Second, conversions: we also run ads aimed at sales from the start. We commit a real budget to Meta upfront, because we believe it can scale. In the early weeks, more of the Meta effort goes into building the audience and learning, because conversions become much cheaper once we have data and a warm audience to retarget. Meta ad copy uses PAS for direct sales ads and BAB for brand and awareness content.

9.8 An honest note on tracking in India

India does not give us a clean, official way to prove that a Google or Meta ad caused a sale that happened on Amazon. Amazon Attribution, which is used for this elsewhere, is not available in India. So until our website is live, we rely on the best available signals: the Amazon Brand Referral Bonus programme where available, unique tracking links where platforms allow, and watching the pattern of spend rising and sales following, plus sensible judgement. We do not use discount or coupon codes for tracking, because that would clash with our no-discount rule. Every report should be clear about what is measured precisely and what is estimated.

9.9 Two stages: sending traffic to Amazon now, to our website later

Our plan has two stages. In Stage 1, during the launch month before the website is live, we run the three-channel test and send purchase traffic to Amazon, tracking it as best we can. In Stage 2, once the Rudione website is live (next month), we redirect Google and Meta purchase traffic to our own website instead of Amazon. This gives us three big advantages: full and clean tracking, because we control our own site; better margins, because we avoid marketplace fees on traffic we generated ourselves; and ownership of the customer, because we capture their details for our email and WhatsApp channels. Amazon continues serving customers who prefer it.

9.10 The large-scale industrial track

As decided in Section 2, the large-scale industrial track gets no paid advertising for now. It is grown organically through LinkedIn, direct sales and credibility content. Once our main revenues are up and steady, we will revisit it and test a paid campaign.

Agency action points

1. Run the one-month test across Meta, Google and Amazon using the suggested split, then concentrate budget on the winner with Rudione's approval.
2. Review and optimise the existing DrainOdorkill Amazon campaign and listing before launching new ones.
3. Review and optimise the existing Google Search campaigns, and test Google Shopping with a small part of the budget after setting up the product feed.
4. On Meta, build audience and chase conversions at the same time, leaning early effort toward audience-building and retargeting.
5. Plan ads for repeated, consistent exposure and retargeting, not one-off bursts.
6. Use the best available India tracking (Brand Referral Bonus, unique links, correlation), and use no discount codes.
7. Once the Rudione website is live, redirect Google and Meta purchase traffic to it for full tracking, better margins and customer ownership.
8. Keep the large-scale industrial track organic for now, with no paid spend until revenues are steady.

9. Set realistic expectations based on the lean budget, and report honestly on what each channel delivers.

Section 10 — B2B Sales Enablement

10.1 What this section does

This section is about helping our sales effort win business customers. Business sales are won one relationship at a time, through conversations, demos and trust. This section sets out the materials, the demo approach, and the lead-handling process that turn marketing's effort into closed business deals. It covers all our business customers: corporate offices (Phase 1), hotels, hospitals and food businesses (Phase 2), and the large-scale industrial contractors (the parallel track).

10.2 What wins a business customer

Business customers do not buy on impulse. They buy when they trust that the product works and that the company behind it is reliable. The first thing that builds that trust is proof from others: when a business sees that respected companies like Siemens, CBRE and Stellar IT Park already use us, they feel safe choosing us too. The second is our proven, time-tested technology, imported from France and trusted across Europe, which works at the largest industrial scale.

Framework applied: *Social Proof, Lindy Effect*

What this means: *Social Proof means people trust what respected others already use. The Lindy Effect means the longer something has worked, the more we trust it. Together they tell us to lead B2B sales with proof of who already uses us and how long our technology has been proven.*

10.3 The sales materials the agency produces

The agency produces a set of materials the sales team uses in meetings, emails and follow-ups. These look professional, credible and premium.

1. Product catalogues and brochures, as PDFs, covering our range clearly.
2. Sample and demo kit messaging: the words and supporting material that go with a live demo or a free sample.
3. Comparison sheets that clearly show the difference between neutralising a smell and masking it.
4. A short, professional pitch deck the sales team can present to a business customer.
5. Case studies built from our existing clients and, as we win them, our industrial projects.
6. A one-page capability sheet for the large-scale industrial contractors, using the industrial content from catalogue pages 35 to 40.

In addition, the agency provides further sales materials as requested by the Rudione team from time to time. The list above is the starting set, not a limit. All these materials follow the logo rules from Section 3.

10.4 Live demos: our strongest sales tool

We already give live demos to customers, and this is one of our most powerful ways to win business. There is nothing more convincing than letting a customer watch a stubborn smell actually disappear, in their own space, in front of their eyes. A demo turns our bold claim into something the customer sees and believes for themselves. The agency supports demos with clear before-and-after framing, simple leave-behind material that reminds the customer what they saw, and follow-up messaging that keeps the demo fresh in their mind. Because a demo is highly visual, it connects directly to our Visualization principle from Section 8.

10.5 How we handle leads so none are lost

Marketing's effort is wasted if the leads it generates are not followed up properly. So we have a clear, simple process for every business lead, wherever it comes from (IndiaMart, Udaan, LinkedIn, the website enquiry form, or a referral).

1. Every business lead is posted into the shared Rudione and agency WhatsApp group. The agency is part of this group, so it can post leads from the website and LinkedIn directly.
2. The Rudione marketing team assigns each lead to the right person on the sales team.
3. The Rudione marketing team keeps track of these leads, so we can see what came in, who is handling it, and what happened to it.

This makes sure no lead is dropped, everyone knows who owns each lead, and we can learn which sources bring the best customers.

Framework applied: 7 P's of Marketing — People and Process

What this means: People is the team on both sides who make the work happen. Process is the set of clear steps and hand-offs, like our lead-handling flow, that make sure good work happens reliably and nothing slips.

10.6 Supporting the large-scale industrial track

The large-scale industrial track (targeting tender-winning contractors and industrial-service companies) is grown organically for now, led by our senior sales team and their relationships. The agency supports it by producing the credibility materials it needs: the one-page industrial capability sheet, case studies as we win projects, and professional content for LinkedIn that shows our technology working at the largest scale.

Agency action points

1. Produce the starting set of sales materials in 10.3, all looking professional and premium and following the logo rules, and produce further materials as the Rudione team requests.
2. Always lead B2B materials with proof: the well-known clients who use us, and our time-tested French technology proven at industrial scale.
3. Support our live demos with clear before-and-after framing, leave-behind material, and follow-up messaging.

4. Post leads from the website and LinkedIn directly into the shared WhatsApp group, where the Rudione team assigns and tracks them.
5. Produce the credibility materials the large-scale industrial track needs, while keeping it organic and sales-led for now.

Section 11 — Launch Plan & GTM Timeline

11.1 What this section does

This section turns the strategy into a sequence of actions over time. It explains what to do in which week, and gives the Rudione team a simple way to check progress. The timeline uses relative weeks (Week 1, Week 2 and so on) rather than fixed dates, so it stays flexible.

11.2 An important starting point: this is a handover, not a cold start

Several things are already running. Our social media channels on Meta and LinkedIn, for both Rudione and Leocym, are already active, and the Rudione marketing team is already posting content. Our sales team is already selling to business customers. A 'coming soon' page is already live on the Rudione web address. So the agency is not starting from zero. When the agency begins, these existing accounts and activities are handed over to them, and their first job is to understand what is already running and make it better, rather than rebuild everything.

11.3 Week 1 — Handover, access and discovery

The first week is about taking over cleanly and doing the research that good work depends on. The agency takes over access to the existing Meta and LinkedIn accounts for both brands, the existing Google and Amazon ad campaigns, and the Amazon listings, and reviews how they are performing. They join the shared Rudione and agency WhatsApp group for leads. At the same time, they begin the two pieces of research from Section 1: the Voice of Customer review study and the SEO, GEO and AEO groundwork. They also identify our individual-customer cleaning competitors. We do this research first because all our messaging should be built on real customer language. Website work also begins this week, on both sites, which are built together.

11.4 Week 2 — Research into action, and content ramp-up

With the research in hand, the agency turns insight into work. They refine our messaging using the real customer language from the VOC study, and begin producing content across the five pillars from Section 8, especially problem-led content and the neutralise-versus-mask education. The teasers for Ionemist and Ionefresh begin now and run continuously until the products go live, so that by launch the audience already feels they know them.

Framework applied: *Mere Exposure Effect*

What this means: *The Mere Exposure Effect means people come to like and trust what they see repeatedly. By teasing Ionemist and Ionefresh steadily for weeks before launch, we make them feel familiar and trusted before they are even on sale.*

11.5 Weeks 2 to 4 — Paid media test and review-building

The one-month paid media test from Section 9 runs across Meta, Google and Amazon, to find which channel performs best. The agency sets up the best tracking available in India, knowing that clean tracking arrives once the website is live. We also focus on earning early Amazon reviews, because reviews drive ranking and trust. As allowed by the one exception to our no-

discount rule, we may use legitimate review incentives to earn honest reviews, following marketplace rules, and never paying for or faking reviews.

Framework applied: *Viral Loop*

What this means: *The Viral Loop is when happy customers bring in new customers, for example by posting or sharing. We design our content, especially short before-and-after demo videos, to be easy and satisfying to share, so each happy customer can help bring the next.*

11.6 Weeks 3 to 4 — Websites go live

Both websites go live in this window. The Rudione selling website becomes our own place to buy, carrying both the individual and business sections, our content library and our proof. The Leocym information website goes live as an information-only site that sends buyers to the Rudione website. Once the Rudione website is live, we begin shifting our Google and Meta purchase traffic from Amazon to our own website, which gives us full tracking, better margins and ownership of the customer. Amazon continues serving customers who prefer it.

11.7 Around Month 2 — Ionemist and lonefresh go live

Our own Rudione products, Ionemist and lonefresh, list and go live around the second month. This is treated as a key brand moment, because these are the first products that are purely our own. The weeks of teasers now pay off: the audience is already familiar with them. We launch them as India's first refills that both remove odour and add fragrance, apply the Rudione-only logo, and lean on our genuine, honest scarcity as the first and only refills of their kind in India.

Framework applied: *Scarcity Principle*

What this means: *The Scarcity Principle means people value what is rare or exclusive. We use only genuine scarcity, the honest truth that no one else offers these refills in India, never fake 'limited stock' urgency.*

11.8 After the first month — Decide, concentrate and grow

After the one-month paid test, the agency reviews which channel performed best and concentrates the budget there, with our approval. The channels and tactics that work get more support; those that do not are stopped. Email and WhatsApp become active as our audience grows. We continue building the content library that becomes our long-term moat, keep nurturing the large-scale industrial track organically, and revisit a paid campaign for it once revenues are steady.

11.9 Simple timeline summary

When	Main actions
Week 1	Handover and access; VOC and SEO/GEO/AEO research; identify B2C cleaning competitors; website work begins on both sites; join leads WhatsApp group
Week 2	Turn research into messaging; ramp up content across the five pillars; begin Ionemist and lonefresh teasers (continue until live)

When	Main actions
Weeks 2 to 4	Run the one-month paid test across Meta, Google and Amazon; build early Amazon reviews using honest review incentives
Weeks 3 to 4	Both websites go live; begin shifting Google and Meta purchase traffic to the Rudione website
Around Month 2	lonemist and lonefresh go live as a key brand moment
After Month 1	Review the paid test, concentrate budget on the winner; activate email and WhatsApp; keep building the content moat; nurture the industrial track

Agency action points

1. Treat Week 1 as a clean handover plus the mandatory VOC and SEO/GEO/AEO research, before changing much.
2. Begin lonemist and lonefresh teasers in Week 2 and run them continuously until the products go live.
3. Run the one-month paid test across Meta, Google and Amazon, then concentrate budget on the winner with our approval.
4. Build early Amazon reviews using only honest, rule-following review incentives, never paid or fake reviews.
5. Deliver both websites live within three to four weeks, built together.
6. Shift Google and Meta purchase traffic to the Rudione website once it is live.
7. Treat the lonemist and lonefresh launch around Month 2 as a key brand moment, with the Rudione-only logo and the genuine 'first in India' message.
8. After the first month, review, concentrate on what works, and activate email and WhatsApp as the audience grows.

Section 12 — Budget & Phasing

12.1 What this section does

This section brings together how our paid advertising money is used and how it grows over time. It deals only with the paid advertising budget. The guiding idea, as throughout this strategy, is discipline: spend where we win, test carefully, and grow what works.

12.2 The budget we are working with

Our paid advertising budget is under fifty thousand rupees per month at the start. This is the ceiling to plan within. It is lean, which is exactly why the discipline in this strategy matters so much. We cannot afford waste, so every rupee is pointed at where it has the best chance of working.

12.3 How the budget is split at launch

For the first month, the budget is split across our three paid channels as a test, to find which one performs best. This split was set out in Section 9 and is repeated here for convenience.

Channel	Share of paid budget	Purpose
Meta (Facebook and Instagram)	About 40%	We commit to Meta upfront, to build audience and drive sales, because we believe it can scale
Google (Search, plus a Shopping test)	About 30%	Already running and catches people searching for their problem; our past testing showed Google driving sales well
Amazon (DrainOdorkill)	About 30%	Our proven selling platform, where sales also build reviews and ranking

This is a one-month test. After the month, we look at which channel delivered the best return and concentrate the budget there.

12.4 How the budget grows over time

Our budget is not fixed forever. It grows as the business grows and as results justify it. The rule is simple and the decision stays with us: management reviews performance from time to time and increases the budget when it sees good enough results to justify spending more. The agency does not decide budget increases. The agency's job is to deliver strong results and report them clearly, so that management has what it needs to decide when to put in more money. This keeps two things in balance: we protect ourselves from spending more before we have proof, and we stay ready to grow quickly the moment something is clearly working.

12.5 The phasing logic: concentrate, prove, then grow

The way we phase our spending follows the same logic as the rest of this strategy. We start by concentrating our limited money on a one-month test across three channels. We find the winner. We then concentrate more budget on the winner and on the hero product. As results prove themselves and as management increases the budget, we widen out: more on the channels that work, then paid advertising on other marketplaces that show promise, and eventually a paid test for the large-scale industrial track once revenues are steady. Everything we grow into must first earn the right to that money by performing. We do not widen out on hope. We widen out on proof.

12.6 What stays organic (no paid budget) for now

To keep the paid budget focused, several things are deliberately grown without paid money at the start. These include our content on LinkedIn, YouTube and our own channels, our customer reviews and the content customers post themselves, our listings on Flipkart and other marketplaces, and the large-scale industrial track. These cost effort rather than ad money, and they build the trust and the content moat that make our paid spending work harder over time.

Agency action points

1. Plan within the monthly paid ad budget set by management, and treat it as a real ceiling.
2. Apply the launch split across Meta, Google and Amazon, run it for a month, and concentrate on the winner afterwards.
3. Deliver strong results and report them clearly, so management can decide when to increase the budget.
4. Never assume a budget increase. Grow spending only on what has proven it works, and only when management approves.
5. Keep the organic activities in 12.6 running well, since they make the paid spend more effective.

Section 13 — Measurement, KPIs & Reporting

13.1 What this section does

This section explains how we measure success and how the agency reports to us. It defines what we track, how we set targets, and how often and in what form we expect updates. This is the section the Rudione team uses to check progress, so it is written to be clear and checkable.

13.2 How we set targets: a framework, with numbers agreed privately

We want concrete targets that the agency can be held to. At the same time, we keep our actual baseline numbers and specific targets out of this shared document. So we do it in two parts. This section defines the metrics we track and the method for setting a target on each one. The actual target numbers for 30, 60 and 90 days are agreed separately between Rudione and the agency and recorded in a private target sheet. Those numbers are real and binding, even though they are not printed here. The method is the same each time: start from our current baseline, agree a realistic improvement for 30, 60 and 90 days based on the budget and the channel, and write it into the private target sheet. Targets should be ambitious but achievable, and respect the lean budget.

13.3 What we measure: the seven areas

We track seven areas. All seven matter, and all seven appear in the private target sheet with agreed 30, 60 and 90-day numbers.

1. Marketplace sales: sales on Amazon and, as listings grow, other marketplaces. Method: agree a target growth in orders and revenue, month on month.
2. B2C sales through the Rudione website: sales on our own website once it is live. Method: agree a target for orders and revenue, starting from website go-live.
3. B2B leads: the number and quality of business enquiries generated. Method: agree a target number of qualified leads per month, tracked through the shared WhatsApp group.
4. Social following and engagement: growth and interaction on our Meta and LinkedIn accounts, for both Rudione and Leocym. Method: agree target growth in followers and engagement.
5. Website traffic and SEO: visitors to our website and our ranking on search and AI answers, including the SEO, GEO and AEO work. Method: agree targets for traffic and for ranking on our priority problem searches.
6. Reviews and ratings: the number and average score of reviews on Amazon. Method: agree a target number of new reviews and a minimum average rating, earned honestly.
7. Brand awareness: how many people we reach and how familiar the brand is becoming. Method: agree targets for reach and impressions across our channels.

13.4 Honest measurement given the India tracking limitation

As explained in Section 9, India does not give us a clean way to prove that a Google or Meta ad caused a sale that happened on Amazon. We are honest about this. Until our website is live and our paid traffic flows to it, the link between ad spend on one channel and a sale on Amazon is judged from the best available signals plus sensible judgement. Once the Rudione website is live and we send paid traffic there, we can track properly, and our measurement becomes far more precise. Every report should be clear about what is measured precisely and what is estimated.

13.5 The flywheel view: watching momentum, not just single sales

We do not only measure one-off sales. We watch whether momentum is building: are reviews growing, is our ranking improving, are repeat purchases rising, is our content library pulling in more visitors each month. These show whether our flywheel is turning faster, which is the real sign of long-term health. We also pay attention to how recent and how frequent our presence is with people who have shown interest.

Framework applied: Flywheel, Recency and Frequency Bias

What this means: The Flywheel means each happy customer and review makes the next sale easier, so we measure whether the wheel is spinning faster. Recency and Frequency Bias means recent, frequent contact influences decisions most, so we track whether we stay regularly in front of warm audiences.

13.6 How often the agency reports

The agency reports on a set rhythm. Every week, the agency provides a dashboard of the key numbers against target, and a weekly campaign report covering how the paid campaigns are performing. Every alternate week, the agency provides a deeper review: not just the numbers, but what they mean, what is working, what is not, and what they plan to do about it. The scope of reporting is defined here, and the exact reporting format and template are provided by Rudione separately, so that reports come in the form we find easiest to act on.

13.7 Content approval: one week ahead

All marketing content reaches the Rudione team at least one week before it is due to go live. This gives the Rudione team time to review and approve every piece before it is published. Nothing goes live without Rudione's approval. This protects our brand, makes sure the logo and claim rules are followed, and keeps quality high. The agency plans its content calendar around this one-week-ahead approval window.

Agency action points

1. Work to the seven metric areas in 13.3, with the agreed 30, 60 and 90-day numbers in the private target sheet.
2. Help agree realistic, ambitious targets from our real baselines, and treat them as binding.
3. Be honest in every report about what is measured precisely and what is estimated.

4. Measure momentum, not just single sales: reviews, ranking, repeat purchases and growing traffic.
5. Provide a weekly dashboard and a weekly campaign report, plus a deeper review every alternate week, in the format Rudione provides.
6. Submit all marketing content to the Rudione team at least one week before it is due to go live, and publish nothing without approval.

Section 14 — Governance, Compliance & Ways of Working

14.1 What this section does

This section gathers all the rules, approvals and working practices that keep our marketing safe, consistent and well-run. It protects our brand, keeps us on the right side of advertising rules, and makes clear how the agency and Rudione work together. Where legal and contractual matters are concerned, this section points to our signed agreement rather than repeating it.

14.2 Single point of contact and approval

Ms. Priya Lalani is Rudione's single point of contact for the agency. All content, campaign plans, questions and approvals go through her. She is the approval authority: nothing is published or goes live without her sign-off. Having one clear owner keeps decisions fast and avoids confusion about who has the final word.

14.3 Content approval: one week ahead, every time

As set out in Section 13, all marketing content reaches the Rudione team at least one week before it is due to go live, so it can be reviewed and approved. Nothing is published without approval, and the agency plans its content calendar around this window.

14.4 The claims rule: honesty and substantiation

Our marketing makes some bold claims, and bold claims must be honest and defensible. India's advertising standards (ASCI) require that claims can be backed up, so we follow clear rules.

The specific claims already approved by the company may be used as written. These are: that we are the only product in India that removes gutka stains; that we are the only real solution that removes human urine, garbage and smoke smells at the source; and that our GreaseBlast was tested as performing far better than other brands. The company has thought these through and considers them defensible.

New specific or number-based performance claims, for example 'kills 99.9% of bacteria in 60 seconds', should not be introduced without either real evidence or written approval from Priya. We currently have no laboratory test data, so we are careful. Over time we plan to commission proper testing, so that we can use stronger, number-based claims safely later.

Framework applied: Falsifiability

What this means: Falsifiability means a specific, checkable claim feels more believable than a vague boast. But a checkable claim also has to be true and provable, or it becomes misleading and against the rules, so we pair bold claims with the duty to back them up.

14.5 Advertising and regulatory compliance

The agency makes sure all our claims, creatives and campaigns follow applicable Indian advertising standards and product regulations, including ASCI guidelines and any rules that apply to cleaning, hygiene and eco or biodegradable claims. If the agency is ever unsure

whether something is allowed, it flags it to Priya before publishing, not after. When in doubt, ask first.

14.6 Pricing and discount rules

As set out in Section 5, we do not discount and we do not use price-comparison messaging. We hold our price with confidence and sell on value and quality. There is one exception: legitimate review incentives, used to earn honest early reviews. These must follow Amazon's and ASCI's rules. We never pay for positive reviews and we never use fake reviews, because this breaks marketplace rules and can get our listings banned.

14.7 Brand and logo rules

Every creative follows the brand and logo rules from Section 3, every time, without exception. Leocym products promoted on Rudione channels carry both logos. The same creatives on Leocym's own channels carry only the Leocym logo. Ionemist and Ionefresh carry only the Rudione logo. The Leocym website stays information-only and is never turned into a sales site. These are fixed obligations, because they come from our business commitments.

14.8 Language rules

As set out in Section 8, business customer and LinkedIn content is in English. For individual customers, we use English when explaining the company and products, and Hinglish for problem-led content, with the exact mix guided by the Voice of Customer research.

14.9 How leads are handled

As set out in Section 10, every business lead is posted into the shared Rudione and agency WhatsApp group. The Rudione marketing team assigns each lead to the sales team and tracks it, so no lead is lost and we can see which sources bring the best customers.

14.10 Budget authority

As set out in Section 12, the agency plans within the monthly paid budget set by management. The agency does not decide budget increases. Management reviews performance and increases the budget when results justify it. The agency's job is to deliver and report results clearly so management can make that decision.

14.11 Accounts, assets, confidentiality and contract terms

Ownership of accounts, logins, content and data, along with confidentiality and other legal and commercial terms, is governed by the Master Services Agreement (MSA) already signed between Rudione and the agency. This strategy document does not change or restate those terms. Where any question of ownership, confidentiality or legal responsibility arises, the MSA is the governing document.

14.12 Ways of working in short

The agency and Rudione work as one team. The agency creates, runs and reports; Rudione, through Priya, reviews, approves and decides. Content comes a week ahead. Leads go into the shared group. Anything uncertain, especially on claims and compliance, is raised with Priya before it goes out, not after.

Framework applied: 7 P's of Marketing — People and Process

What this means: *People is the team on both sides who make the work happen. Process is the clear steps, approvals and hand-offs that make sure good work happens reliably and nothing important slips. A strong product still needs strong people and process behind it.*

Agency action points

1. Route all content, plans and approvals through Ms. Priya Lalani, and publish nothing without her sign-off.
2. Deliver all content at least one week before it goes live.
3. Use only the company-approved specific claims, and introduce no new specific or number-based claims without evidence or written approval.
4. Make sure every claim, creative and campaign follows ASCI and applicable Indian regulations, and flag anything uncertain to Priya before publishing.
5. Follow the no-discount rule, with honest review incentives as the only exception, never paying for or faking reviews.
6. Follow the brand, logo, website and language rules exactly, every time.
7. Post all business leads into the shared WhatsApp group for the Rudione team to assign and track.
8. Plan within the budget set by management and never assume an increase.
9. Treat the signed MSA as the governing document for accounts, assets, confidentiality and legal terms.

Section 15 — Risks & Assumptions

15.1 What this section does

This section is honest about what could go wrong and about what the plan depends on. Listing these openly is not pessimism. It helps everyone manage expectations, watch for early warning signs, and avoid being surprised later by something we already knew was possible. The agency and the Rudione team should revisit this list from time to time.

15.2 The main risks, and how we reduce them

The lean budget limits how fast we can grow. Under fifty thousand rupees a month is tight for educating a whole new category. We reduce this by concentrating spend where we win, growing organically, and increasing budget only as results prove themselves.

We have no laboratory test data yet. This limits the bold, number-based claims we can make safely, and it is a compliance risk if claims are not backed up. We reduce this by using only company-approved claims for now, avoiding invented numbers, and planning to commission testing over time.

Tracking is imperfect in India until our website is live. We cannot cleanly prove which channel drives an Amazon sale. We reduce this by using the best available signals, being honest about what is estimated, and moving paid traffic to our own website once it is live.

Educating a new category takes time and money. Because we are creating the idea of odour neutralisation, customers must first understand it before they buy. We reduce this with problem-led content that meets people at their existing pain, rather than only abstract education.

Competitors may respond once we prove the market. If we show that odour neutralisation sells, larger players may try to enter. We reduce this through our patents, which block copying on the odour side, and by moving fast to own the category and build a content moat.

A value competitor like Satol uses a message close to ours on the cleaning side. We reduce this by not competing on price alone, and by leaning on quality, our French technology, and our odour neutralisation advantage that they do not have.

The Rudione products could slip past their expected launch. Ionemist and Ionefresh are planned for around the second month. If they are delayed, we reduce the impact by keeping the teasers running and leading the launch period with our proven hero, DrainOdorkill, and the wider Leocym range.

We depend on marketplace algorithms. Our Amazon sales depend partly on Amazon's ranking and rules, which we do not control. We reduce this by building our own website and owned channels, so we are not fully dependent on any one platform.

15.3 The main assumptions the plan rests on

This plan assumes the following are true. If any of these changes, we should revisit the strategy.

1. Our core claim holds: our products genuinely remove odour at the source rather than masking it, and our cleaning products are genuinely better quality and value.
2. We remain the only odour neutraliser of this kind in India, protected by patents, for the foreseeable future.
3. DrainOdorkill continues to perform on Amazon and remains a sound choice as our paid hero.
4. Our proven strengths continue: our business sales, our well-known clients, and our experienced team.
5. The Rudione products (lonemist and lonefresh) launch roughly on time, around the second month.
6. Both websites go live within the expected three to four weeks.
7. The budget can be increased by management when results justify it.
8. The agency completes the mandatory research (Voice of Customer and SEO, GEO and AEO) before building final messaging.

Agency action points

1. Keep this risk and assumption list in mind, and raise it with Priya if any assumption looks like it is no longer true.
2. Watch for the early warning signs of the risks above, and flag them early rather than late.
3. Help reduce the risks through the actions listed, especially concentrating spend, building the content moat, moving to our own website, and respecting the claims rules.
